2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Petri [US 5,281,149].

Regarding claim 1, Petri discloses an electric card fixture (figures 1, 10), configured to a circuit board (13), the card fixture comprising: a base (12) having an opening and a joint portion/standoff (figure 1) disposed in one end of the base for being mounted on the circuit board; and a pivot member (36) pivotally connecting to the other end of the of the base, wherein the pivot member seals the opening of the base when being turned to a certain position.

Regarding claim 2, Petri discloses the base and the pivot member being made of metal, so that the electrical card fixture can be connected to ground by means of the joint portion (abstract).

Regarding claim 3, Petri further discloses the joint portion of the base being a lock member with a slot (figure 10), by the slot, the lock member becomes two lock pieces and makes the joint portion work as a board lock (figure 10).

Regarding claim 4, Petri discloses at least on mounted portion (46) being disposed on a proper position nearby the joint portion (figure 10).

Regarding claim 5, the method of mounting the standoff to the base is inherit in the product structure because a surface mounting technology is not defined.
